Education

Ph.D. in Physics, University of Florida, Gainesville, FL 08/2020−Present

B.S. in Physics, University of Notre Dame, Notre Dame, IN 08/2016−01/2020

- **Honors**: Magna cum laude, Outstanding Undergraduate Research Award.

Publications & Presentations

C. Bunker, S. Hoffman, J.-X. Yu, X.-G. Zhang, and H.-P. Cheng. "Discretized scattering solution for electron mediated entanglement." Paper in preparation.

C. Bunker, S. Hoffman, J.-X. Yu, X.-G. Zhang, and H.-P. Cheng. "Scattering for entangled state switching in molecular dimers." Sanibel Symposium (2022).

L. Riney, **C. Bunker**, S.-K. Bac, J. Wang, D. Battaglia, Y. C. Park, M. Dobrowolska, J.K. Furdyna, X. Liu, B.A. Assaf. "Introduction of Sr into Bi_2Se_3 thin films by molecular beam epitaxy." J. Appl. Phys. 129, 085107 (2021).

J. Wang, X. Liu, **C. Bunker**, L. Riney, B. Qing, S.K. Bac, M. Zhukovskyi, T. Orlova, S. Rouvimov, M. Dobrowolska, J.K. Furdyna, B.A. Assaf. "Weak antilocalization beyond the fully diffusive regime in $Pb_{1-x}Sn_xSe$ topological quantum wells." Phys. Rev. B 102, 155307 (2020).

Research

Research Assistant, University of Florida, Gainesville, FL 08/2020−Present

- Created Python code that simulates how an electron scatters from magnetic molecules using Green's function techniques.
- Used my code to demonstrate how to control the entanglement state of molecular magnetic dimers for quantum information science applications, and prepared a paper on the results.

Research Assistant, University of Notre Dame, Notre Dame, IN 01/2020−05/2020

- Calculated the bound states of band gap inverted IV-VI quantum wells using a $\mathbf{k} \cdot \mathbf{p}$ perturbative method implemented with independently written Python code.
- Investigated SrBiSe and CuBiSe using x-ray diffraction, Raman spectroscopy, and Fourier-transform infrared spectroscopy.
- Performed low temperature magnetotransport experiments on α-Sn thin films to investigate evidence for superconductivity.
- Developed a simple numerical model for accounting for the exchange effects of introducing paramagnetic ions into lead salts and calculating subsequent band levels.

Research Assistant, CERN, Geneva, Switzerland 01/2019−05/2019

- Analyzed lepton data from millions of Monte Carlo simulated W decay events with independently written Python and ROOT code.

Research Assistant, University of North Florida, Jacksonville, FL 05/2018−08/2018

- Investigated potential improvements to superconducting nanowire single photon detectors (SNSPDs) using AWR Design Environment circuit design software.
